Today, a coronavirus hackathon can mobilize 1000s of volunteers.<sup>1</sup>

60000 people may join the European Union event on April 24-26.<sup>2</sup>

**How many lives saved** if 6000 teams compete? If they collaborate?<sup>3</sup>

# Could we get inspired by watching how body parts work?

Yesterday's hackathons

- host sets the topic agenda, awards
- teams of participants compete to build projects
- finally: few rewarded, **most work discarded**

Today's hackathons?

- host sets the topic agenda, awards
- teams cooperate to build **1 meaningful project**
- finally: **all rewarded**, most work valued

# Enhancing our group dynamics

1 goal

5 competing projects

- participants seek host recognition (power plays)
- host is overwhelmed
- scarcity → wasted motivation and resources

1 goal

1 agreed project

- participants seek mutual recognition (respect)
- host has time for internal / external coordination
- abundance → mutual support and creativity

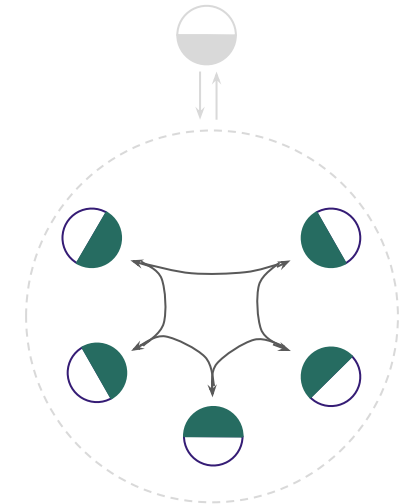

# Three contracts

**Vision Contract**

**Mission Contract**

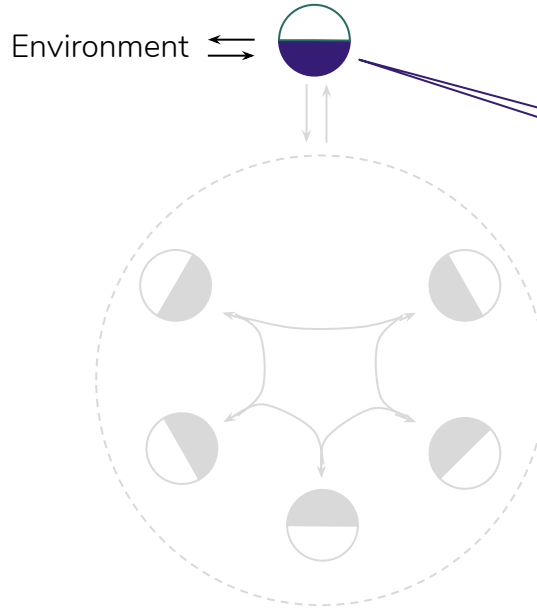

**Cooperation Contract**

# Four steps implementation

## 1. Vision Contract

The host shares the dream and sets the workframe.

Example

“We save a maximum of lives by developing together one only ventilation machine through **one** only project.”

# Four steps implementation

## 2. Mission A Contract

The host proposes a way of interacting according to his/her needs **to the group** of participants.

Example

1. "I propose that we meet twice a day for an hour."
2. "Meanwhile, please discuss with each other, and get to an agreement on one single project. I am available to help."

# Four steps implementation

## 3. Cooperation Contract

Participants present their ideas for one project. They listen/give positive strokes and ask questions. Then, each shares his/her preference. The purpose of the discussion is to collectively select one project.

Example

“Let’s sort out and analyse the different propellers of the ventilation machines.”

“Yes, let’s organize subgroups and work on each machine part!”

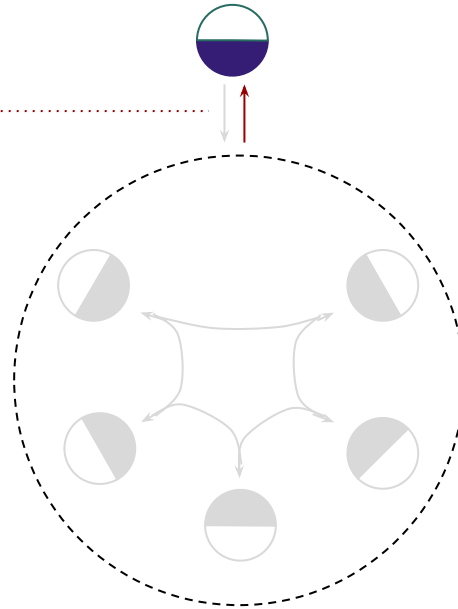

etc.

# Four steps implementation

## 2. Mission B Contract

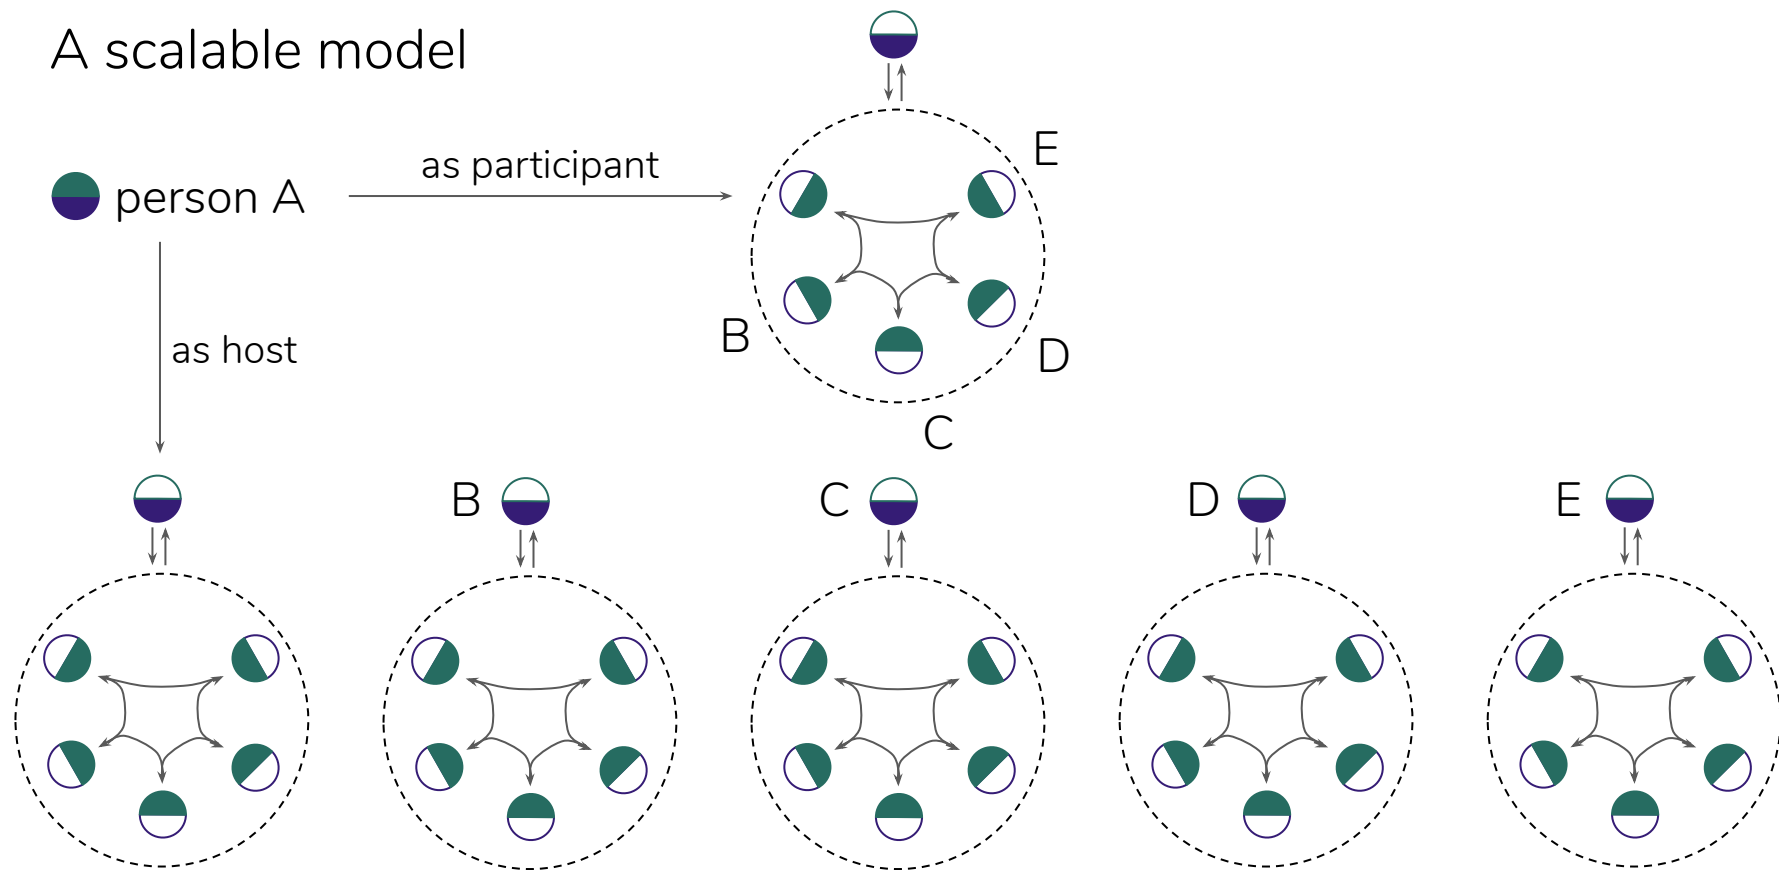

Participants give feedback **as one voice** to the host, for the host to coordinate information to the whole group (other teams working in parallel).

### Example

1. "We agree to meet 30 minutes twice a day."
2. "For step one, we agreed to sort the machines by categories of parts."

# A scalable model

Adapted from Laugeri. Emerging Change. TAJ 2020.

# The secret

1

## one modular ventilation machine

- ✓ collaboratively created <sup>1</sup>
- ✓ community-based <sup>2</sup>
- ✓ improved by cycles <sup>3</sup>
- ✓ fully documented <sup>4</sup>
- ✓ peer reviewed impact <sup>5</sup>
- ✓ freely reproducible <sup>6</sup>
- ✓ contributors rewarded <sup>7</sup>

1. Laugeri. Emerging Change. TAJ 2020.

2. Benkler. Open Access and Information Commons. Oxford 2016.

3. see agile methodology, open collaboration

4. see open notebook approach

5. see open access peer review

6. see copyfair licences, free/libre software, open-source hardware

7. see value flows, value accounting

Should you feel inspired and be determined to cooperate this way, I would be glad to share the approach and discuss it with you. :)

Lead, Open Village

The Open Village is a hands-on event to explore how open hardware can improve access to health and reduce medical public spending. It will take place during the Geneva Health Forum, from November 16 to 18, 2020. The Open Village is also supported by the Open Geneva festival.
