Quiz

Quiz

In scuba diving, tanks are filled with oxygen.

- True
- False

Unfolded, our lungs have a surface of

- 0.2 times the skin.
- 3.5 times the skin.
- 12 times the skin.
- 50 times the skin.

Main risk factors for respiratory diseases are

- allergens
- inadequate nutrition
- air pollution
- irritants
- exposure to smoke
- lack of physical activity

The two most common chronic respiratory diseases are

- cystic fibrosis
- chronic obstr. pulmo. disease
- tuberculosis
- asthma
- lung cancer
- sleep apnea

The technique that uses the breathe to scan the body

- Pranayama
- Vipassanā
- Abdominal breathing
- Pilates

Quiz

In scuba diving, tanks are filled with oxygen.

- True
- **False, they are filled with air**

Unfolded, our lungs have a surface of

- 0.2 times the skin.
- 3.5 times the skin.
- 12 times the skin.
- **50 times the skin.**

Main risk factors for respiratory diseases are

- **allergens**
- **inadequate nutrition**
- **air pollution**
- **irritants**
- **exposure to smoke**
- **lack of physical activity**

The two most common chronic respiratory diseases are

- cystic fibrosis
- **chronic obstr. pulmo. disease**
- tuberculosis
- **asthma**
- lung cancer
- sleep apnea

The technique that uses the breathe to scan the body

- Pranayama
- **Vipassanā is about observing the incoming and outgoing breath without controlling it**
- Abdominal breathing
- Pilates

Common hackathons fails

information overload

+ waste of resources

= loss of motivation

↙
**as little information
as needed**

+ **coordinated work
across teams**

= **feeling of belonging,
projects sustain**

Example of ventilation machines

60+ open source projects

800,000 machines needed

1 open-source modular design required

- ✓ easy to reproduce where needed
- ✓ validated and iteratively improved
- ✓ adapted to locally available resources

Covid hackathons between March-June 2020: what impact on people's lives?

Event	Days	People	People/day	Projects	OSVM
EUvsVirus	3	22,000	66,000	2,160	16
WirVsVirus	3	28,361	85,083	1,200	4
Covid-19 Global Hackathon	7	18,920	132,440	1,561	2
Hack the Crisis India	3	15,000	45,000	350	?
Global Hack	3	12,000	48,000	500	1
Subtotal		96,281	376,523	5,771	23
130 other hackathons	3-7	>53,719			
Total		150,000			

≈ 1568 FTE + collective wisdom

HEALTH TECHNOLOGY AS COMMONS: TRUSTABLE, AFFORDABLE, ADAPTABLE

Geneva Health Forum 2020 · Open Village · www.openvillage.ch

6 in 10 humans still have no access to care, or do not adhere to it, despite rising investments.¹⁻³
Alcohol-based hand rub⁴ and WikiMed⁵ illustrate how creating freely reproducible equipment and software with communities can: save millions of lives, increase integrity, cut costs by 90%.
Cooperation-driven care is the only way to realize the 2030 agenda in time: health for everyone.⁶
We present nine alternatives to the dominant proprietary excluding innovation model, to drive development towards a responsible, solidar society.

Hand prosthesis to ease one's daily life

A prosthetic hand usually costs 6-10 K€. Enable brings together over 30000 volunteers who design and distribute 3D-printed prostheses to vulnerable people.
www.enablingthefuture.org + www.gre-nable.fr + www.enablenepal.org

Drugs produced with integrity

India has a pioneer approach in pharmaceuticals. Open Source Drug Discovery brings together 7900 people who collectively develop open-source, low-cost therapies for neglected diseases such as tuberculosis, malaria, leishmaniasis. www.osdd.net

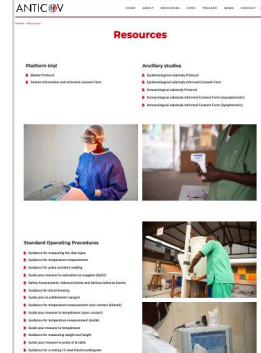

Open-sourcing MRI could save the German healthcare over 200 M€ yearly⁷

Solidarity-driven medical innovation is up to 99% cheaper.

15 examples of open-source respiratory health commons

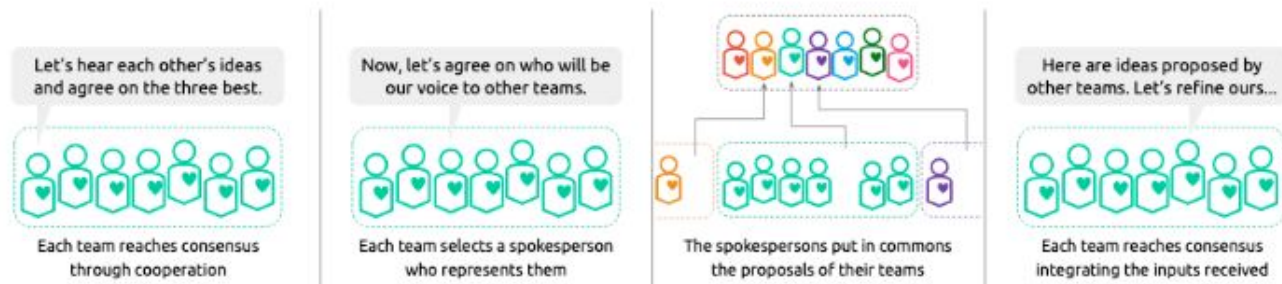

Global crises, democratic solutions—within days

Using Internet to empower citizens, reach popular consensus, and ensure democratic decision-making

In the last months, governments around the world have adopted public policies to promote large-scale vaccination, and covid certificates. Whether such measures are adequate or not has been largely debated. But why have such debates emerged? To this day, alternatives to centralized decision-making have been limitedly discussed.

Here, I present how an online platform could help thousands of citizens express their needs (plurality), agree on common priorities (popular consensus), and pool resources to become the protagonists of a common project, like body cells coordinate in real time to preserve life.

Spokespersons should only ease information sharing, that is to provide other spokespersons

A six steps model

1 Ensure shared values among contributors

2 Reach consensus on common priorities

3 Find one's rightful place to contribute to the collective

4 Map existing projects and best practices

5 Consolidate the work, prioritize steps to adoption

6 Mutualize resources and allocate them fairly

Thank you
